

EV chargers co-funded by the Government

The Low Emission Vehicles Contestable Fund has committed co-funding to over 1,100 private and public electric vehicle (EV) chargers in New Zealand, contributing to New Zealand's wider charging infrastructure and enabling EV uptake. There is at least one public EV charger every 75km on almost all New Zealand highways.

The map shows co-funded public chargers; totals beneath include private chargers such as those used for car share schemes and organisations' fleets.

Totals include chargers co-funded but not yet allocated to a specific region. Chargers that have not been allocated are not included in the map above.
