

EV chargers co-funded by the Government

The Low Emission Transport Fund (LETF) has committed co-funding to over 1,200 private and public electric vehicle (EV) chargers in New Zealand, contributing to New Zealand's wider charging infrastructure and enabling EV uptake. There is now at least one public EV charger every 75km on almost all New Zealand highways, and the LETF has a future focus on ensuring remaining gaps are filled, and people can charge where and when they need to.

New Zealand total includes chargers co-funded but not yet allocated to a specific region. Chargers that have not been allocated are not included in the map above.
